## SNAP-N-SPRAY®

Reusable Switch & Receptacle Covers

Labor saving paint guards now permit the inclusion of switches and receptacles with all other rough wiring components. Devices are protected during painting, plastering, and/or spray texturing; then easily removed for installation of face plates. SNAP-RC does not work with 5325 Leviton receptacles.

**ASHRAE 62.2-2007**  
ASHRAE Standard 62.2 is the national ventilation standard of design for low-rise residences up to three-story multi-family buildings. 62.2 requires continuous mechanical ventilation for the entire house to be 7.5 CFM per bedroom (master bedroom x2) plus 1 CFM per 100 sq. ft. with sone level not to exceed 1.0.

ASHRAE 62.2 will be adopted by Energy Star January 1st 2012  
The ASHRAE 62.2 requires continuous mechanical ventilation.  
A builder that is building an Energy Star home will be required to meet this ASHRAE 62.2 ventilation code.

### Required Continuous Ventilation Rate (CFM)

Floor area	0-1 BR	2-3 BR	4-5 BR	6-7 BR
<1500	30	45	60	75
1501-3000	45	60	75	90
3001-4500	60	75	90	105
4501-6000	75	90	105	120
6001-7500	90	105	120	135

To Comply with ASHRAE 62.2, a WhisperGreen, FV-08VKM3 set at 40 CFM provides the ideal solution. Or to keep air pressure balanced inside the home, WhisperComfort provides supply air and complies with 62.2 by setting the exhaust fan at 40 CFM. For larger homes or whole house ventilation, a combination of WhisperComfort and/or WhisperGreen continuous ventilation fans can be utilized to fulfill the standards set by ASHRAE 62.2

### To Calculate Roof Cable Length Needed:

1. Roof Length X Roof Multiplier  
(Multipliers shown include 1' of gutter cable per foot of roof edge.)
2. Measure Dormers (up, over, down)
3. Calculate Valleys (6' minimum each)
4. Calculate Downspouts  
End of run equals spout length  
Along run equals 2 X spout length
